

What We Do

The Alcott Center for Cognitive Enhancement works with children of all ages and abilities to help unlock their full potential.

Areas of focus include:

- Poor grades
- Learning disabilities
- Speech and Language problems
- AD/HD
- Working Memory deficits
- Sensory Integration Dysfunction
- Central Auditory Processing Disorder
- Dyslexia
- PDD-NOS, Autism, Asperger's
- Down Syndrome

And other developmental delays/disorders.

The Alcott Center for Cognitive Enhancement

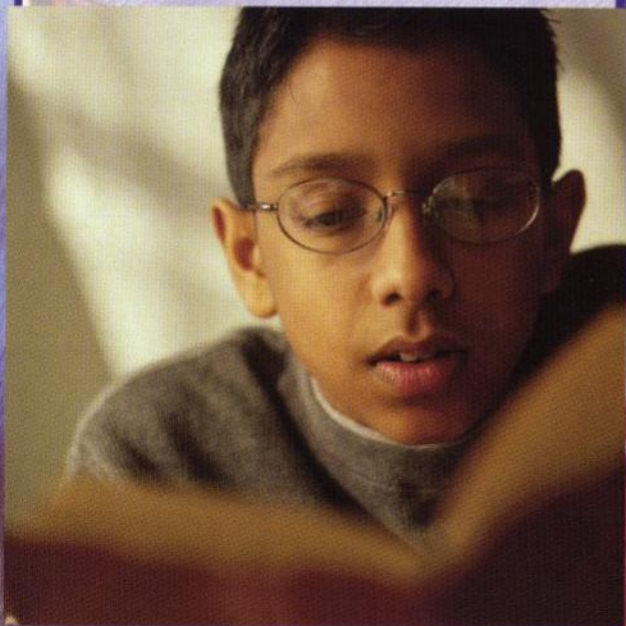

*Individualized,
research-based
learning programs.*

How We're Different

The Alcott Center for Cognitive Enhancement finds and treats the underlying cause for a child's challenges, not just the symptoms. Each child is evaluated using a series of screening tools, to determine areas of strength and identify areas where support is needed. Once those needs are determined, we custom design a program specifically for your child. All children are different, so we treat them all differently! Through this unique approach, we are better able to find the child's core needs, and meet them, helping the child experience success.

AUDITORY INTERVENTION

Our home-based Auditory Intervention programs, Samonas Auditory Intervention and The Listening Program, combine decades of clinical research in various areas including neurology, music theory and auditory processing.

Auditory Intervention is an effective tool designed to restore and re-educate the auditory system to work in concert with the brain through a series of carefully designed and individually selected music, voice and nature CDs.

Auditory Intervention can improve attention, memory, learning, processing, sensory integration, motor skills, communication and speech & language. It has been used successfully to treat AD/HD, Autism, auditory disorders and sensory dysfunction, as well as to improve comprehension and overcome various challenges with learning.

ACADEMIC ACHIEVEMENT

Our individualized programs utilize research-based intervention methods and techniques developed by experts, including PACE, Master the Code, Lindamood-Bell learning processes, Cogmed Working Memory Training, and Learning Ears.

These tools are not ordinary tutoring. They aggressively remediate the cause of the problems, not just the symptoms, and improve the brain's ability to process information. As a result, a child will be a more efficient learner. Through these programs, a child can experience significant improvement in reading, math, memory, processing speed, comprehension, logic and reasoning, and other academic skills.

As always, our programs are custom designed to meet the specific needs of YOUR child.
